

Collamat® Linerfree

Collamat® Linerfree System is a cost saving labelling technology that protects the environment by eliminating tons of liner waste (liner-free). It is a pat. pend. system consisting of Collamat® Linerfree Labeller and Collamat® Linerfree Paper. Having 60% more volume on the roll diameter compared with traditional labels, and utilising one roll for any label length or layout, the production time is optimised effectively. You have less production breaks and less handlings than with other thermal printed labels. In keeping with the Collamat® modular design there are various choices of application modules.

Collamat® Linerfree Systems:

- Collamat® Linerfree Labeller
- Collamat® Linerfree Paper

FEATURES

- Individual adaptation – Three applicator modules are available: pneumatic arm, conveyor plate, or table model (above photos)
- Special nonstick surface – The adhesive of the labelling paper sticks only to the product and not to the applicator
- Less handlings – No waste at all to collect by the line
- Fast and easy change-over – New label length and design without changing the label roll, simply push a few keys on the panel
- Network or stand alone – Connection to Ethernet network adds control control, or choose a stand alone solution which adds intelligence, i.e. handles input from weight, scanner, etc. directly
- Protects the environment – No silicone waste from the liner

TECHNICAL DATA

Print speed:	Variable 50 - 203 mm/sec
Print width:	Max 104 mm
Dispensing speed:	Variable 1 - 25 m/min. Option up to 50 m/min
Resolution:	203 dpi / 300 dpi
Label width:	50 mm, 70 mm, and 100 mm
Label length:	38 - 254 mm with standard RAM or up to 514 mm with memory module
Label roll length:	500 m of paper with a core diameter of 76 mm
Label type:	Self-adhesive thermal paper without liner (Collamat Linerfree Paper)
Paper thickness:	80 microns
Drive unit:	Stepper motor
Approbation:	CE/EMC

All data are indicative and may be subject to alteration
